

As a <role>, I want <feature> so that <reason>.

User Story:

As a user, I want one time login, so I don't have to do it every time and my data can be stored.

Description:

The user will be able to login (preferably once) so that there will be some way of storing user data. If everything works correctly, the user will be sent to the welcome screen. If it fails, the user will remain at the login in screen and an error message will be displayed.
