

As a <role>, I want <feature> so that <reason>.

User Story:

As a hungry and indecisive user, I want restaurant suggestions to help me decide on a place to eat.

Description:

We found that more often than not people struggle and waste a lot of time trying to figure out what to eat. The user wants suggestions on places to eat, maybe even based on what they have eaten previously. If everything works, the user will have a list of restaurants to choose from. If the an error occurs (there is no previous data), default restaurants will be displayed with a message indicating that there is no previous user data. This story relies on the user being signed in.
